

KSWebIZ Pharmacy Reporting Information

In accordance with Kansas Statute 65-1635a, the administering pharmacist shall promptly report a given immunization to an appropriate county or state immunization registry.

In Kansas, the only immunization registry that exists is the state registry, KSWebIZ.

There are three ways for your pharmacy to report data to KSWebIZ and it is your pharmacies' choice on which exchange method you use.

Exchange Method	Description
Direct Entry	Each user at your clinic has a login and manually identifies what immunizations were given to a respective patient.
HL7 2.5.1 Interface Real-Time	Your electronic practice system sends data to the registry in real time, electronically, using HL7 2.5.1 interface messaging and connection.
HL7 2.5.1 Interface Batch	Your electronic practice system extracts the required data, formats it using HL7 2.5.1 interface specifications, and an assigned user from your clinic uploads the file to the registry's direct portal for processing.

For additional information or to begin the enrollment process for the Kansas Immunization Registry, please contact our team via email at immregistry@kdheks.gov or phone at 877-296-0464.
